John

These are the areas we covered as best we can remember. ~~There were~~ We have all the original data - photo strips, flight records, etc from Lockwood plus Smellie "reports". (except for the Hill - Rust which was subcontracted for Watts - Griffis for Tacola (now Hecla).

I just remembered that we were never paid for all of the work ~~p~~ by Malta Mines - Falcon claim group north Actron and east of Grant - Mercury. I think we can legitimately claim that we own this one. It found an EM anomaly without supporting Mag. The airborne maps are enclosed. I can't recall if we geochemed this or not but am sending to Whitehorse for this file. In any case it was in a valley where geochem wouldn't be as effective. Dirks map indicates it should be over unit 3. along the flank of Mt Mye.

There were other well located anomalies which weren't followed up. For example, the Zippx Syndicate claims ~~[illegible]~~ adjoining Anvils Sea claims on the Southeast home one.
