DRILL LOG SUMMARY GH87-07
FREEPORT/STRYKER RESOURCES
GRIZZLY HEIGHTS

45° ---> 071
228.6 metres
Elevation: 1860 metres

0.0 to 10.4 meters (m)	CASING
10.4 to 38.0 m	INTERBEDDED PHYLLITE AND GREYWACKE Interbedded dark grey, graphitic, fissile phyllite and medium light grey, sometimes calcareous greywacke, 2% calcite, siderite, limonite microveins. Core recovery is better in the more competent greywacke.
38.0 to 86.6 m	PHYLLITE Dark grey to black, graphitic, calcareous, fissile, up to 1% disseminated pyrite, 2% calcite microveins.
86.1 to 86.2 m	Felsic Dyke.
86.6 to 196.9 m	LIMESTONE Medium grey, calcareous, crackled texture, 10% crackled calcite microveins, occasionally up to 60% (marble).
100.5 to 101.5 m	Quartz-sericite-schist.
102.0 m	Corals believed to be <u>Amphipora</u> , Devonian.
115.4 to 118.3 m	Quartz-sericite-schist.
154.6 to 156.4 m	Felsic Dyke.
174.7 to 175.9 m	Felsic Dyke.
196.9 to 202.6 m	Felsic Dyke. Light grey, siliceous, sericitic, pyritic, equigranular with quartz, calcite veins and microveins.
202.6 to 228.6 m	PHYLLITE Dark grey, graphitic, calcareous, 2% calcite microveins
205.0 to 206.2 m	Felsic Dyke with quartz-pyrite veins.
219.7 to 221.8 m	Felsic Dyke with quartz, calcite, pyrite and minor sphalerite, minor galena veins.
223.8 to 224.7 m	Felsic Dyke.
228.0 to 228.6 m	Felsic Dyke.
228.6 m	END OF HOLE GH87-07
