## DRILL HOLE LH87-04

**FREEPORT/STRYKER RESOURCES**  
**TSIRKU-JARVIS PROJECT**  
**LOW HERBERT TARGET**  
 Logged by Andrew Wilkins

**80°-260**  
**Length: 322.2 metres**  
**Elevations: 1370 metres**

0.0 to 2.1 metres (m.)	Casing
2.1 to 49.8 m	Pillow Basalt Dark green, aphanitic, amygdaloidal, chlorite-epidote-magnetite alteration and fracture fillings, quartz-calcite microveins.
49.8 to 59.2 m	Quartz-Sericite-Chlorite-Pyrite Schist Medium green, chloritic, amygdaloidal, spherulitic, eutaxitic 1% disseminated and vein pyrite.
59.2 to 64.6 m	Andesitic Volcanics Medium green, chloritic, amygdaloidal, spherulitic, eutaxitic 1% disseminated and vein pyrite.
64.6 to 141.8 m	Andesitic Volcanics As above with 5-10% disseminated and vein pyrite, trace (<0.1%) chalcopyrite.
141.8 to 149.7 m	Greywacke Tuff Light grey, bedded, equigranular, calcareous, 1% pyrite and/or pyrrhotite in microveins.
149.7 to 166.1 m	Phyllite Dark grey, calcareous, 3% disseminated pyrite and/or pyrrhotite.
166.1 to 175.9 m	Andesitic Sill or Massive Flow Light green, medium fine grained, massive, 1% disseminated pyrite and/or pyrrhotite.
175.9 to 180.9 m	Phyllite As above
180.9 to 206.0 m	Andesitic Sill or Massive Flow As above, minor phyllite.
206.0 to 211.5 m	Phyllite As above
211.5 to 217.0 m	Andesitic Sill or Massive Flow As above

Table 2 (cont'd)

217.0 to 219.0 m	Phyllite As above
219.0 to 244.4 m	Andesitic Sill or Massive Flow Medium light green, chloritic, aphanitic, amygdaloidal
244.4 to 304.2 m	Phyllite, minor interbedded Dacitic Tuff Phyllite as above, with light red, equigranular, homogenous dacitic tuff.
304.2 to 314.7 m	Andesitic Volcanics Medium light green, chloritic, aphanitic, amygdaloidal
314.7 to 318.5 m	Andesitic Sill or Massive Flow As above
318.5 to 322.2 m	Andesitic Volcanics As above
322.2 m	E.O.H.
