

LEGEND

- Overburden
 - Quaternary Gravel
 - Quartz Vein
 - Fault
 - Late grey, fine-grained dykes, other contacts
- LOWER CRETACEOUS - PROSPECTOR MOUNTAIN SUITE**
- Granite Gneiss, commonly foliated, porphyritic, medium to coarse grained, with up to 5% anatexis, quartz porphyry, and Feldspar porphyritic monzonite
 - Xenolithic breccia in CFT: clasts largely metabasalt and andesite
 - Feldspar Porphyritic Monzonite (FP Monz), incl. Dykes
 - Fragmented Feldspar porphyries in aphanitic groundmass
 - Xenolithic breccia in FP Monz: metabasalt and andesite clasts
 - Ox. Stockwork in FP Monzonite
 - Sheared FP Monzonite
- LOWER CRETACEOUS?**
- Feldspar Porphyritic Basalt - Andesite, includes tuffs and fragmentals, with some evidence of hydrothermal alteration, including features of Wolverine Creek metabasalt and andesite
 - Broccated Feldspar Porphyritic Basalt - Andesite
- DEVON-MISSISSIPPIAN, WOLVERINE CREEK METAMORPHIC SUITE**
- Granite Gneiss, commonly foliated, porphyritic, medium grained, with silification +/- phyllite +/- argillite alteration common
 - Broccated Granite Gneiss
 - Sheared, schistose Granite Gneiss
 - Metabasalt, including amphibole, silica +/- phyllite +/- argillite alteration common but less developed than in granitic gneiss
 - Broccated metabasalt
 - Sheared metabasalt
