

NOTE: These notes are very important for all sections which crosses massive projection problems with respect to the Big Indian Faults shown on long sections. This relationship with the highly uncertain nature of the Big Indian Fault system has caused us to select not to attempt to show this version of the geology. Northeast of station 100+100 the cross section geology and long section geometry is together not both are entered into the total 3-D model.

CYPRUS ANVIL MINING CORPORATION
