

M E M O R A N D U M

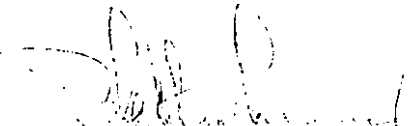

000758

TO: ALL FOREMEN
FROM: N. G. Stephenson
DATE: January 12, 1971
SUBJECT: ORE CONTROL

Last night there were full instructions in the Foremen's Log re grade required of mill feed of 13% for the rest of the month. We also started a log in the Foremen's office from ore control to aid in selecting the grade.

Fourty-eight loads of 7% ore from the low grade stockpile were delivered to the crusher. There is no way the Mill could get 12 or 13 percent ore from this feed.

Also, it is evident that the instructions in the Foremen's Log were not adhered to. In the future, these instructions must be initialed as to having been read and understood. If unable to comply, he will phone myself or Hugh Grenier for further instructions.
