September 13, 1967

Mr. R.S. Adamson
Dolmage, Campbell & Associates
808 Bank of Canada Building
Vancouver 1, B. C.

Dear Bob:

Received your letter of September 12th yesterday.

Dave will send the rough section as soon as possible. We are really just getting on to that section business now.

The drill hole on the LEE is to be at 2S on line 16E and to be drilled to 800 feet. The location sort of splits the difference between the IP and gravity anomalies. Of the four gravity highs checked, only this one gave a kick on the IP. If this one produces ore we may have to check deeper on the others.

No holes have been spotted on the 1967 gravity work NW of Faro as we are still waiting for the residuals. All the drills have enough to keep them occupied until I get back.

Mr. Pennebaker will be coming again in early November and I think you and he should plan to be here at the same time on that trip. I'll be passing through Vancouver on Saturday and will try to contact you by phone regarding a visit in early October which may be useful, but if you are committed elsewhere, I don't think it is critical.

Regards,

M.O. Hampton
Chief of Exploration
