M E M O R A N D U M

TO: J.W. Mossop  
FROM: M.O. Hampton  
DATE: August 19, 1971  
SUBJECT: ORE BLOCK RELIABILITY STUDY

The accompanying memo from Pete Forrest reports on his analysis of ore predictions and actual results from mining.

The 41% loss endured on the benches above 4065 is not expected to set any form of trend for the rest of the orebody. The portion of benches below 4065 that have been mined are very close to predictions and large losses are not anticipated.

The results of this study will be used in planning future mining.
