

1974 PIT SUMMARY (74-07)

002254

- total volume movement from the pit held at 7.2 M yd.
(this is an effort to improve on the all material unit cost by minimizing the material which would have to be handled by 5 yd. shovels.)
- 6 months of developed ore provided for at end of 1974 pit.
- 100% of the red stockpiles are consumed in the 1974 pit
- as much material as possible is consumed from the yellow stockpiles to make up to 3.65 M tons of mill feed.
(NOTE: some yellow stockpile equivalent grade material left behind in pit under a closely similar plan in lieu of being able to mine an equivalent grade product from yellow stockpile).
