

TO:- R.L. Haffner From:- D.W. Philip

Subject:- MILL FEED

The alternatives and requirements for mill feed are limited for the next 3 to 4 weeks. These are based on the amount of waste to be moved on the 3910 bench to expose 333,077 tons of 3.7% Pb and 5.3% Zn.

$$\begin{array}{r}
 3910 \quad \frac{85,000 \text{ cubic yards broken}}{4,986 \text{ cubic yards/day}} \\
 = \underline{\underline{17 \text{ days}}}
 \end{array}$$

Available sources of mill feed to make up this gap in time are:

H.G.S.P.		
L.G.S.P.	- 6 days	} 19 days
3910	- 3 days	
Sink Cut	- 10 days	
(300ft x 120ft x 20ft)		

Any additional mill feed required will have to come from a 20 foot high bench on the 3790 sinking cut.

D.W. Philip,
Acting Chief Engineer
