MEMORANDUM

November 23rd, 1956

TORONTO

TO: DIRECTORS, TRIANA EXPLORATION LIMITED

FROM: MR. G. M. RADISICS

SUBJECT: CONWEST'S ASBESTOS PROPERTY SOUTH OF DAWSON, Y.T.

I understand that preliminary tests undertaken by the Mines Department at Ottawa returned excellent results and indicate that the majority of the samples represented high-grade, long, spinning fibre.

I am endeavouring to obtain actual values and when successful in doing so, will advise you.

MEMORANDUM:

Re: Cassiar Creek Asbestos Find, Yukon Territory

Joe Rankin advised that the Cassiar Creek asbestos showing near Dawson was not spinning grade fibre, but the tests showed that it is perhaps one of the best cement grade fibres in the country. He put the rock value at \$20.00 per ton and said that they had received offers of one million dollars for the property from the asbestos company.

TO: DIRECTORS, TRIANA EXPLORATION LIMITED  
FROM: MR. G. M. RADISICS  
SUBJECT: CONWEST EXPLORATION COMPANY'S ASBESTOS DISCOVERY, YUKON

mk

The asbestos discovery optioned and under development by Conwest Exploration located about 30 miles from Dawson City, Y.T., along Cassiar Creek, is responding splendidly. Much of the asbestos disclosed in this work appears to consist of high-grade long fibre variety. Indicated available tonnages developed to date are said to be about 40,000 tons per vertical foot.

*Radisics examined the fibre and believes it to be rather hard. It is not a premium grade deposit.*
