PROPERTY EXAMINATION

Mile 158 Mayo Road

Mr. Nick Barnett.

Sunday, April 28th, 1963.

Quartz Mica Schist occurs at the above-mentioned mileage with a considerable amount of hornblende. Magnetite Copper mineralization occurs in this formation. The mineralization occurs over a distance of 800' in length, dipping 40° East, with the average width of 1½'. A visual estimate of Copper will not exceed .5%. Due to heavy snow conditions, we were not able to continue along the strike.

This mineral occurrence does not warrant any further attention.

A. Kulan,
Kerr-Addison Gold Mines Ltd.
