Subject Chisholm-Toporowski-Harman Groups, Bonnet Plume Area, Y.T. **Date** September 13, 1974

On August 28, 1974, Ted Chisholm and Carl Toporowski visited this office regarding a possible deal on 260 claims in 5 groups located 12 miles north of the main Barrier Reef property at Goz Creek in the Bonnet Plume area of the Yukon Territory.

The group holding the claims includes Ted Chisholm, Carl Toporowski, and Andy Harmon. They have optioned the Bar group to Canorex (adjoining the available claims on the southeast) and have optioned another group east of the available claims to the Harmon Syndicate (made up of Camflo, Bear Yellowknife, RAM Petroleums, and United Siscoe). Welcome North ground lies to the south.

The claim area is underlain by middle Devonian carbonate reefs (somewhat higher stratigraphically than the Barrier Reef area). These rocks are flat-lying, and overlain by slate in great part. Light-coloured zinc occurs in pervasive carbonate veining and in vugs in the reefoid dolomite. The overall effect is, in an area where the overlying slate is eroded away, to encounter broad irregular patches of zinc mineralization. The Mike Group, which is the only one on which extensive prospecting has been done, has a reported 30 occurrences of zinc. One of those Ted Chisholm sampled, and estimates a true thickness of 19 feet grading 20% zinc.

The groups with approximate claim numbers available for option are:

Mike Group	-	40 claims
Rio Group	-	40 claims
TC Group	-	36 claims
Algal Group	-	36 claims
Reef Group	-	100 claims

As to terms available (note that groups may be optioned separately) Toporowski and Chisholm suggested $125.00 payment per claim with a sizeable commitment for the first year. They would also like a 70%-30% deal, with their 30% largely carried. This is negotiable, but gives the range required.

I advised Mike McGinnis of Great Plains on this matter, and he expects to see Andy Harmon in the Goz Creek area during September. Hopefully, he will visit the property area.
