Lithologic Log

Date: 11/10/92 Logged By: P. Ledwidge

Code	From		To		Recov.		No.		Unit	Description	
	10	14	16	20	22	24	26	28			30
	10		12	0				101			Casing - No recovery
	12	0	3	5	S			102	101B		Oxidized till w 30-40% granodiorite (Anvil Batholith) boulders & cobbles Fines are orange/brown sandy & have granodiorite pebbles. Recovery ~ 70%. Lower contact sharp - marked by abundance of boulders
	3	5	S	15	9	0		103	101B		80% Granodiorite boulders 20% fine grained oxidized sandy fines (orange/brown). Some fines washed away. Some boulders appear to be 3 or 4 feet across. SS- SF-5 Some minor SE chips in till. Lower contact marked by gradual decrease of large boulders. 90% recovery.
	15	9	0	17	0	0		104			Same oxidized till as unit 02 Recovery good except at lower contact where 1.5 ft is lost (washed out) local SE rock chips.
	17	0	19	3	0			105	5A1		Soft dark gray to black w minor white qtz ± carbonate bands 11 P _{S2} . P _{S2} laminated at 75-80° CAW. S ₂ planes black & stain fingers black. Some oxidation on S ₂ planes & on joint surfaces. Secondary veinlets crosscut S ₁ & have been folded by S ₂ . Excellent recovery. Minor ox Py in veinlets 11P _{S2} .
											93.0 EOH
