

Aug 27/62

re. Kroider Gossan Property, Quiet Lake Area, Yukon

- notes from phone call from Seivola, night of Aug. 24/62

- zone is 3 miles west of Mile Post 50 on Canal Road - at the southeast end of Quiet Lake.

- They had staked a total of 36 claims - Kroider's Dawn 1-8 incl  
Kerr's Dawn 9-36 incl

- I instructed Bill to have Dawn 37-40 incl. staked because of our original understanding with Kroider that 40 claims would be in the agreement.

- a long N-S E-W traverse has given neg. results; they are going to try a long E-W traverse

- what geochem testing they have done is also neg.

- Bill got neg. results from fluorescent lamp test of some material

- Bill after checking with Spaulding is not convinced that he did obtain a qualitative zinc chemical result.

- the gossan could be 3000 feet long - it is long in an E-W direction

- the bulldozer can't dig through the gossan; they are trying to get ripper teeth for it.

- they also may rent a Pujar rock drill from Conwest

- Haricot has helped Thompson stake 6 claims onto N-end of our group.

- Bill expects answers in 2 weeks' time; was going to stay there a few more days himself

- I asked him to show me before leaving the Yukon.
