REMARKS: _____

GEOLOGY: Thin bedded limy siltstones, NW striking, with moderate NE dips, are cut by rhyolite dykes and/or sills. A shear zone adjacent to one dyke is rusty, brecciated, locally silicified, and exposed over 1m. It is within a large base metal soil anomaly. Outcrop is sparse.

MINERALISATION: The results from 3 samples taken are negative. (YEY-6 D1R R. dyke, w. py
6 D2R sheared, silicified material.
6 D3R Dyke, greenish a., ~2% py)
