

PROPERTY/PROJECT DATA FORM

005343

PROPERTY NAME LEGAL TENDER

UPDATES: \_\_\_\_\_

ACTIVE FILE: Y or N

CLAIM NAMES: LT (and WM?)

FINAL RECOMMENDATION: Y or N or M

OWNER NOTIFIED: Y or N

DATE NOTIFIED: \_\_\_\_\_

REPORT WRITTEN: Y or N

LOCATION: Watson River, Y.T.

NEAREST TOWN: Whitehorse

ACCESS: Helic. or very rough 4x4

PROVINCE: Y.T.

STATE: \_\_\_\_\_

N.T.S. 105D 7W (6E)

TWP \_\_\_\_\_

RANGE \_\_\_\_\_

LATITUDE: 60° 20' N

LONGITUDE: 135° 14' W

COMMODITY: Au

DATA RETURNABLE: Y or N

DATA RETURNED: Y or N

DATE RETURNED: \_\_\_\_\_

FILE LOCATION: \_\_\_\_\_

MONTHLY REPORTS: \_\_\_\_\_

OTHER REFS: \_\_\_\_\_

OWNER(s): Havilah Gold Limited

CONTACT: Larry Bratvold

TEL. NO: 984 - 4654

ADDRESS: \_\_\_\_\_

INITIATOR: Bratvold

DATE: ~ 26 July 1986

SUBMITTAL OR SOLICITATION:

(Sub.) or Sol.

DATA STUDIED: (Y) or N

EXAM. PLANNED: Y or N

EXAMINED ON: 28 July 1986

BY: D. Arscott

DRILLED: Y or (N)

KEY QUESTION(s): To what extent could hanging wall dilution and/or high back support costs be expected during mining?

REMARKS: \_\_\_\_\_

GEOLOGY: A shallow dipping quartz vein up to 140cm thick outcrops at 4 locations over a strike length of about 200m. The host is believed to be Late Cretaceous to Tertiary quartz diorite. The quartz is coarse grained, locally vuggy, partly massive, and lacking sulphides except for local accumulations of galena.

MINERALISATION: In the hanging wall about 30m above the vein is a large rhyolite dyke, porphyritic to flow-laminated, moderately altered, one of the abundant rhyolite dykes of the vicinity of the adit. It is reported to be subparallel to the vein, but contacts are difficult to follow.

MODEL: The host rocks are fairly well fractured and the immediate hanging wall of the vein is sheared over perhaps 30cm.
