

Conclusions

- Ddhaw Ghro rocks - Selwyn Basin stratigraphy
- McArthur Batholith -significant component of Tintina Gold Belt
- Regional mineral potential map shows highest mineral potential category within Selwyn Basin
- Detailed mineral potential map
 - highest mineral potential between Sideslip Creek and Grey Hunter Creek (showings; soil, silt, and chip anomalies)
 - high gold potential in northern hills (between Nogold Creek and Crooked Creek)
 - tungsten potential to the south - needs better characterization
- Recommendations
 - remove eastern and northeastern areas from land withdrawal
 - consider seasonal restrictions under MLUR
 - Change Nogold Creek to YepGold Creek
