

VG claims

006735

1/1  
LG + JP

(115 I/3)

June 20, 1985

Location: - approx 2.5-3 kms W. of VIC claims  
- between Klaza R + Iron Ck + N of Iron Ck  
- misplotted on claim map → trends 20-30°  
(not N20°W - as plotted)

Owner: Gordon Dickson, Whitehorse (667-7059)

- staked due to presence of V.G. in quartz  
in creek float (personal communication)

Exposure: very very poor

Rock types - predominantly G-QM float - frost bail material  
suggests local origin, but also alluvial material in area.  
- off property Ap, A, At and A lap. t. float  
also observed. Ap dyke observed cutting G-QM  
in Trench 1.

Mineralization: - q stringers observed in Tr. 1 (off property)  
in G-QM along Ap dyke margin (YIN-5G2R)  
possibly sampled in 1984 as CR17 which ran  
45 ppb Au.

- strongly silicified R float with py at  
placer camp. - appeared more angular than observed  
creek float and no similar float found in creek.  
- origin unknown - possibly from trenches on ridge  
to N. (YIN-5G2R)

- subrounded-rounded q float in creek.
