OFFICE MEMORANDUM

*D. Tenney*

DATE: June 20, 1990

To: Dave Tenney, Chief Geologist  
From: Eric Beaumont, Manager of Processing  
Subject: **VANGORDA MINERALOGY**

With reference to your recent memorandum on the above subject, of particular interest and potential value is the gold content of the Vangorda Ore. In order to identify possible means of recovering and or improving the recovery of the Au, Ag and Cu, it would be necessary to undertake a detailed mineralogical study followed by metallurgical testwork to establish a possible flowsheet which could be adapted to the existing Faro Mill.

Since we do not have the capability to perform this type of work on site, I would recommend that samples of the various ore types be forwarded to Lakefield Research for the necessary testwork to be performed.

*Eric Beaumont*
