

Dupont JMK, RAB ADC 5 April 84

Klinkit Sn.

Corporat Pro

Val A. 500000 1% // Trench 1.18 Sn 5 M. ^{casiterite}Val B 1.5-2.5 x 10⁶ T grade?

Mag Anomaly

Sw. Pt { 3 target Areas.
Slip. }Sylvester - Miss. Clastics - Liny
Roof Pendant. Sn \approx 10-15 m of
Contact -

Seagull Batholith intruded Sylvester

- Grudians + sheeted veins

original interest.

Skarns ^{intertwined} come later.

Amenable to magnetics.

Tin liberated by retrograde metamorphism.
Tin analysis done by method that gives
Sn in ^{large} Cassiterite ^{stannite} not Sn in
Silicate.

Comino - Dome - J.C. Stephens J.V.

Val A 131 15 60 06

- Headwater Seagull cr
- 12 km N. Swift Riv.
- Grant Abbott GSC Mapped area '79 '80
- Sylvester lst by Dupont works.
in cupola of Seagull batholith
- Lst thickness 0-50 meters.
- Mag VLF geol \rightarrow Skarn overlay.
- Proposed 300 M. drilling in 25m holes.
- Too Small to be economic on its own JMK AB

Val B. 131 20 60 06.

Root Pedant.

Partridge Creek. West side.

Rapid escape of hydrothermal fluids.

Center vertical Jt + stopping of
barren blocks within skarn

Spectacular Mag Response. +60000 γ max 02500 γ

- Granite 58500 γ
- Mag VLF patchy
- Soil - 80 STD (not to high - some ^{high} may show
Sn vein.

- Major E-W structure through center of
grid.

- Rock sample. high Sn in Silica
From comparison of Cassiterite / Total Sn.

- Large Plumbing system so mag potential
at depth. JNK

Potential 1.2×10^6 T. Hot drilled.
to 2.5×10^6 T.

Grade. low

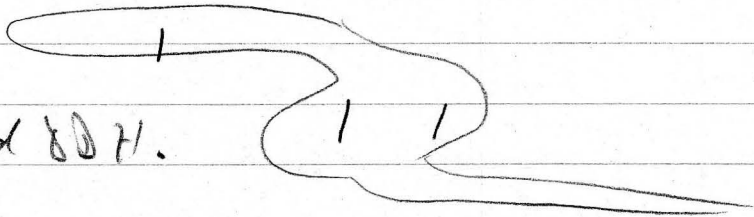

Swift

Swift Claims. 131 42 6012
△ 6321'

(Photos avail for topo map. 81)
(for all areas)

Mag. 81
North area

1 Proposed BDI.

7 holes in 3 areas - ≈ 25m each
Potential for $2-3 \times 10^6$ T.

DC Syndicate 500,000 T to South.

Du Claims - Dupont to 1999
Drilled quartz - Sn Veins.

.5 M Veins ≈ 1%.

Too deep in system is feeder veins.

Dupont

Ultra mobile.

531 5160.
