To P.M. Kavanagh From W.M. Sirola

Subject Glenlyon Project Report - 1969  
Yukon Territory - 105 F, K & L Date October 26, 1970.

Herewith somewhat belatedly Fred Chow's report on this project.

As you already know, the culmination of this work was the staking of the Lyn Group. We appear to have two choices regarding further exploration on that group and these are:

very limited drilling on two anomalies on lines 118 and 134; or

doing seismic work on both these lines to determine if the anomalies are caused by highly variable thicknesses of overburden.

In his report Fred does mention some geochemical anomalies to the northwest of the claim group, but I do not advocate pursuit of these anomalies until such time as we have determined the cause of the gravity anomalies on the Lyn Group.
