Ted Caldwell of C.M. & S. volunteered the following information this afternoon.

Dynasty mines have a target 6,000 x 1,000 ft. which has been explored by fifteen rotary drill holes. (non-coring)

The mineralization is 100 ft. thick with values over a 50 ft. true thickness. The only information he had on grades was that one rotary hole carried 8% combined Pb + Zn., and that a diamond drill hole in the same location gave a 15% combined average.

Presumably this information came from Peter Sevensma, but I do not know that for certain, nor do I know how authentic Caldwell's figures are.

If all of the dimensions given are true, then there would be approximately 40 Million tons in the deposit.

The market price today was \$4.95 - \$5.00.
