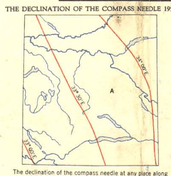
THE DECLINATION OF THE COMPASS NEEDLE 1950



The declination of the compass needle at any place along a red line is the declination given on that red line. At other places the declination is between those given on the neighbouring red lines; thus at the place marked A, the declination is between 33° 30' E. and 34° 00' E. The declination of the compass needle is decreasing 4' annually.

Surveys in 1947 and compilation in 1950 by the Topographical Survey from air photographs taken in 1949. Lithographed and printed by the Army Survey Establishment, R.C.E., Department of National Defence, 1951.
