

Dear Toru -

I am sending you this sketch of Freegold Mtn. which I have just completed so that you would have more information ~~from~~ for your report.

We used the bulldozer to dig up the rocks where information was needed.

It appears that the zone is the top of a mass which has been exposed by the cutting down of the drainage pattern.

The geology on the east side is taken from Johnston's memoir 214.

Must get this into the mail now.

Best wishes,

Ron Ganger.
