## YUKON TERRITORY

MAP 4264 G

ISOMAGNETIC LINES (absolute total field)

- 500 gammas .....
- 100 gammas .....
- 20 gammas .....
- 10 gammas .....

Scale: One Inch to One Mile = 1

Magnetic survey, July to October 1965 by Aero Photo Inc.  
No correction has been made for regional variation

The planimetry for this map was obtained from topographical maps sheets published by the Department

The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to conditions near, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of basic rocks, such as diabase, gabbro, or serpentine, which have a relatively high iron content, but in special instances may be due, or partly due, to concentrations of magnetic ore minerals. By means of
