Dear John

Here is the map that I have been working in the past few summers. The geologie is as following. (Red.) Newer Volcanics. (Green.) Gniess and Quartzite. (Yellow) is Serpentine or Serpentinized Peridotite. (Black) is Granite. and where you see an (x) those are what they call pingoes, I call them blowouts possibly caused by water action, they look like a little volcano. All that is numbered are showings. #1 Galena #2 Galena #3 Galena #4 Galena #5 Galena #6 Scheelite Galena arsenic Calcopryite and ^{the rest} Vit has me buffalowed #7 Sphalerite #8 Galena #9 quartz with spalerite and siderite #10 arsinopryite and sulphur #11 body of Garnets in shist, they are of the red variety. The Serpentinized peridotite has some Nickel and a interesting trace of platinum. I got it marked with a N.P. on map.

~~There is some staking~~ some of the ground has been staked, last summer, it is marked on map, I guess this is all I have on the sixty mile John that is in place

Now here are the things that are float.
Cinnabar marked on map as c. this has
been found on Miller Erk. and Glacier Erk.
Wolframite & Scheelite marked on map (S.)
these minerals were only found on Miller Erk.

The Tintina Trench

#1 On Jensen Erk. The old timers were telling me
that there has been a lot of Cassiterite found
in their placer. #2 Up on Solom Dom there is some
high grade Galena and little copper this is
staked. #3 Behind Dawson there I found
Serpentine in 3 places marked on map
(yellow) then there is this greenish shist
maybe a phyllyte then a little Granite then
a black looking Argilite. In the old days
there has been some copper and silver found
up Lapine Erk. it is interesting country.
#4 German Erk. I was told by a old timer
that there was a boulder of Galena on the
top of the mountain. I never found it, but
never the less the area is well mineralized
there is a lot of rust in the Erk. The formation
is mostly black shist with some green stone

#5 I went up to # 5 marked on map from no 4 incidently this was in 1955 or 26 I'm not sure but, this is a well mineralized area. my intentions were to go back there every year, but I never made it the formation is quartzite red & green slate and a sort of a quartz granite. I found some galena in a ~~black~~ pinkish looking quartz ~~there~~ there was an odd spot here and there in the quartz so I never bothered taking any of the material for assay, found traces of Copper, and some ~~Other~~ Iron with assayd .45 in copper, but it was a funny thing every time it rained my geiger counter went crazy

Bad
connection

#6 Three summers ago there was a big fire in this part of the country, and they had cats to build fire brakes and one of them uncovered a vein of Galena but I was told by the forestry man that it was covered up again. the formation is a greenish looking shist possibly a phyllyte.

#7 Quartzite with a lime body at the lower end. the limestone has a few specs of Galena in it bellow that there is some serpentine with some slip fibers. the red spot

close to Forty mile is newer Volcanics but it is odd looking as it looks like clinckers and when you brack it there is Obsidian Glass in it not far from there there is a small body of serpentⁱⁿe accros the forty mile there is a little serpentine with a little fiber. on the Yukon River marked on map (A) I found some real good fiber but not enough of it

#8 found the Iron body it is good looking Hemetite but I don't think there is enough of it the formation is quartzite some greenstone the tops of the mountains are caped with limestone.

#9 a lot of limestone in this area.

#10 Serpentine ^{and} Black looking shist.

#11 quartzite and some limestone at lower end. #

I guess this all I have up on the Tintina trench. You wouldn't happen to have a Geological map of this area?

I got the Aeromagnetic maps from Eagle down to Ethel Lake on the trench

Well I guess this will be all for now
My best Regards
Mike

21.

is a Crk. I went up this Crk. and found some real nice looking Serpentine, it looked similar to the stuff at Clinton Crk. but, no Asbestos, so I went up this hill, and when I got up there I found this lake smack dab right on the top of the serpentine.

I left this Crk. down to the Yukon R. on the right limit on the Yukon R. There is one more Serpentine showing with some slip fiber in it, now if I remembe right this showing ~~is~~ is right accros from the mouth of this Crk. that I just mentioned, if not, it is the next bend going down river. Then going further down the Yukon R. about 8 miles from the border there are two big boulders, I believe they are called the Old Lady and the Old Man Rock. That is as far as I have been down the Yukon River. ~~In this~~ At this point there is a big flat on the right limit of the Yukon River.

There was an old timer on Glacier Crk. by the name of Joe Mayer, you probably met him, He passed away about 3 years ago and he told me that on Sheep Crk. there was Galena found. I was looking for Geologic maps of this area in my batch of maps at home, but I didn't find any.

Have you any suggestions as to where I may be able to get some?

III-

I have been checking the maps but, there is no Sheep Crk. There is a Sheep Mountain on the Canadian side north east of Eagle and I believe that one of the tributaries that runs out of Sheep Mountain in the Tatonduk River is called Sheep Crk. Will look up some of the old maps as I believe that I have seen Sheep Crk. marked on one of them.

Also maybe I should write Juneau Alaska for some of the geologic maps of the areas in question?

This is all I can think of right now.
My best personal regards to you,
Your Mrs. & your Family from me &
Louella.

Best Regards
Mike Chepko

P.S. Received Retainer Cheque
"Thanks" also if you happen to see
Ted down there in Chile say hello to
him for me. also tell him to watch
those senoritas, as I understand
that they are real dynamite

Box 41
Dawson City,
Yukon Terr.
Jan. 15, 1967.

Dear Ted:

Today I found out that the Shell Oil Co. are Getting a whole lot of staking Sheets for this part of the country, They are for the north of Dawson.

Im certain that it is not for oil that they are after, because for oil they dont need staking sheets. My belief is that they are after minerals.

I have had a talk with Ivor, and I was told that You left for South America , and that there wont be enything going on in Alaska for some time to come, so now I got myself a job here inDawson it is a spare time job but it is better then a kick in the pants, it keeps the wolf away from the door.

This is all the news I have from up here.

Best regards.

M. Chefkoi.

November 15, 1966.

Mr. Mike Chefkoi,
DAWSON,
Yukon Territory.

Dear Mike:

Enclosed please find assay certificates
for samples 192 to 196 submitted by you. There is
nothing of interest in these samples.

Yours very truly,

ATLAS EXPLORATIONS LIMITED,

EOC:dh
Enc.

E. O. Chisholm,
Exploration Manager.

November 8, 1966.

Mr. Mike Chefkoi,
DAWSON,
Yukon Territory.

Dear Mike:

Thank you for the run-down on the Caley samples.

Regarding the sample Clyde brought down, I sent you a spectograph report on this November 3. There does not appear to be anything in it but iron. The yellow color is probably due to iron oxide stain which looks much brighter when it is damp. Perhaps we should have a closer look at it next spring when the snow is off the ground.

I received the book and found it very interesting, especially the descriptions of the original gold rush at Dawson. I'll go over it with you when I next see you.

I have not received the assays on the Pieren's stuff yet. Your mercury samples are out for analysis.

What happened to the pick up, and how is the staking going on 60 Mile?

Regards,

EOC:dh

E. O. Chisholm.
