

MAP 4279 G

# LADUE CREEK YUKON TERRITORY

ISOMAGNETIC LINES (absolute total field)

500 gammas  
100 gammas

The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to conditions near, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of igneous rocks, and low magnetic anomalies normally indicate the presence of sedimentary rocks.
