

MAP 4293 G

# LOS ANGELES CREEK YUKON TERRITORY

Scale: One Inch to One Mile =  $\frac{1}{63,360}$   
Miles

COPIES OF THIS MAP MAY BE OBTAINED FROM THE  
DIRECTOR, GEOLOGICAL SURVEY OF CANADA, OTTAWA

Magnetic survey, October 1965 to April 1966 by Aero Photo Inc.  
No correction has been made for regional variation

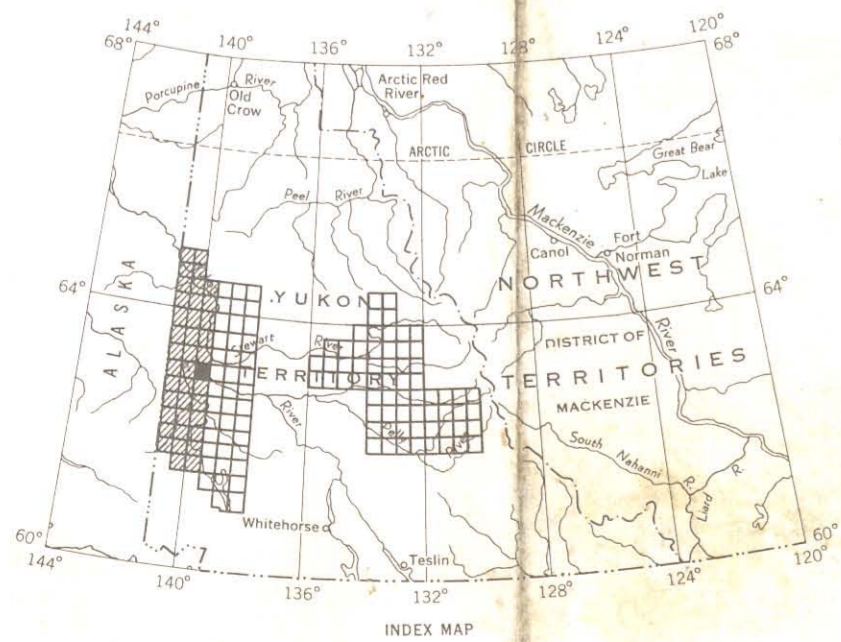

The planimetry for this map was obtained from  
topographical map sheets, published by the Department  
of Mines and Technical Surveys.

The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to conditions near, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of basic rocks, such as diabase, gabbro, or serpentine, which have a relatively high iron content, but in special instances may be due, or partly due, to concentrations of magnetic ore minerals. By means of the magnetic anomalies, various rock bodies or structural features, such as faults or folds, may be traced into, or across, areas of low or no out-crops. In many instances, however, no interpretation of particular anomalies may be possible without further geological information.
