Magnetic survey, October 1965 to April 1966 by Aero Photo Inc.
No correction has been made for regional variation.
The planimetry for this map was obtained from

The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to igneous rocks, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of basic rocks such as diabase, gabbro, or serpentine, which have a relatively high iron content. In special instances they may be due partly due to concentrations of magnetic ore minerals. By means of
