ISOMAGNETIC LINES (total field):

- 500 gammas
- 100 gammas
- 20 gammas
- 10 gammas

Aerborne Magnetic Survey, June 1964 to February 1966, by Canadian Aero Service Limited, Ottawa

No correction has been made for regional variation

The planimetry for this map was obtained from

013136

The magnetic data on this map were compiled from information recorded along the flight lines shown. The anomalies expressed by the magnetic contours are dependent on the variable magnetic intensities of the underlying rocks, and may be due to conditions near, or at unknown depths below the surface. High magnetic anomalies normally indicate the presence of basic rocks, such as diabase, gabbro, or serpentine, which have a relatively high iron content, but in special instances may be due, or partly due, to concentrations of magnetic ore minerals.
