November 16th, 1970.

Mr. Hugo Brodell,
P.O. Box 13,
Watson Lake, Y.T.

Dear Hugo:

I received your letter about ten days ago and your rock samples arrived shortly after. I sent out a sample of the mineralization from the Montana showing for assay and although it did not look like a world-beater, Atlas will want to look into the property further.

I have noted the location of your showing in the Muncho Lake area and have brought it to John Brock's attention. I don't know if it will be possible for them to look at it but you will be able to talk it over with him in the spring.

Please let Montana know that the company is interested in his property and will get in touch with him through you in the spring.

Best regards,

ATLAS EXPLORATIONS LIMITED,

M. E. (Tim) Coates

MEC/mp

Watson Lake Oct 28 - 1970

Dear Tim

Today a man come to me with a sample that he askt me to send to you "He have heard of the possibility of lowgrade moly"

He told me he have 8 claims stakd and recorded in a new area with good mineralization

I went to the recording office and got the map. and I can see his is right about this been a new area. He is a whiteman his name Montana and this was his first season as a prospector. He want Atlas to have a look at his prospect but that is 6 inches of snow ther now.

The place is 90 miles up Car Tung road and 1 1/2 mile of the road. I'm sending you the maps so you can see the area.

Andy Szabo was here and told Pete that he got a deal on his galena up at 701. I was in the hills at the time and have not seen him since I got back. I made one trip about 25 N.E. from Watson to a gorsan but was too late ther was 56 claims stakd already. and I had the same luck on my next trip

I have been thinking about our trip in to Beaver River country. As far as I can remember ther is a belt of granit running from Carbon River S.S.E for about 30 miles to Jack Pine Lake, up north the granit is real old, but at

The Lake when the gossan was when we was unable to land, then the granit is peccle with pyrite. Long befor I got intrested in prospecting I had samples sent in to assay for gold from this place. one of the samples returned 0.17 gold. at the time \$6⁰⁰. but one of Can West prospectors told me. gold in granit never. so I never recarded the claims but even today I can lay my hand. on the rock when I took the sample. And this winter if thinks go right I might fly in and. bring some more samples. Then I will find out if I was salted.

Them days I did not hunt gossans for minerals but for possible moosticks when to kill meat for my dogs. I has one more big gossan somewhere when we first landed. and another one about one mile befor we got to the Lake, when we was unable to land. And one about two miles from the last one we landed on. But the biggest one of al. is about 10 miles down Beaver River from our last landing. I'm sending the Muncho Lake map. I can't get the right, one. but this will do. The C.W. floods was found ⁱⁿ market area. I'm mailing the rocks today so you might get them in the same mail. If intrested let me know. so I can tell MONTANA. And will you send the G.S.C. MAP back to me. Next time I run across them C.P. AIR Tickets. I will send them in

Best regards To you all
Hugo Brodell
