

INTER OFFICE MEMO

VANCOUVER OFFICE

DATE February 8 19 68

TO: Mr. D. W. Tully
FROM: Mr. J. P. Sawyer
SUBJECT: Trans Yukon Exploration Limited ←

I have studied the report left by Dave Robertson on February 6th describing the claim group held by this company situated to the south of Quiet Lake, Y.T.

The main interest at present relates to possible nickel occurrences on the property. The presence of ultra basic bodies is suggested by magnetics and by concentrations of nickel in soils. The high nickel soil values could be related to concentrations of manganese and could therefore be misleading. P. H. Sevensma refers to reports of serpentinized ultra basics on the west side of the property. Geological information is critical and the geological data available at this time leaves much to be desired. It is therefore recommended that this prospect requires further work and more complete information before it could be considered for participation by Cyprus Exploration Corporation.
