Flight altitude: nominally 1000 feet above ground level where terrain permitted.

MAP 1357G

MOUNT BILLINGS

YUKON TERRITORY

Scale: One Inch to One Mile = $\frac{1}{63,360}$ Miles

Air photographs covering this map-area may be obtained through the National Air Photographic Library, Topographical Survey, Ottawa, Ontario.

Airborne Magnetic Survey, June to September, 1961, by Aero Surveys Ltd.

No correction has been made for regional variation.

The planimetry for this map was obtained from topographical mapsheets, published by the Department of Mines and Technical Surveys.

The magnetic data on this map were recorded along the flight lines shown. The magnetic contours are dependent on the variability of the underlying rocks, and may be due to conditions below the surface. High magnetic and the presence of basic rocks, such as diabase, gabbro, have a relatively high iron content, but in special cases, may be due to concentrations of magnetic minerals. The magnetic anomalies, various rock bodies or as faults or folds, may be traced into, or across, crops. In many instances, however, no interpretation may be possible without further geological information.
