SUBJECT	16 Cl. base metal prospect 12 miles NNE Tiley Lake		DATE Feb. 10
MESSAGE	<p>Ownership - Pat Crean, Ed Grier. Both independent prospectors. Showing first staked by Grier while prospecting for Grant Yellowknife 1962. Claims in good standing to Aug. 1967.</p> <p>Showings - Galena, sphalerite, chalcopyrite as replacement lenses in limestone near granitic contact. Also some fracture filling. Grab samples Plot 2n 12-15%, 4-5 oz/ton Ag. Some Ag to 25 oz/ton, Cu up to 0.5%. Showing within <u>gossan zone</u> that extends for several miles particularly to W. Belt not thoroughly prospected. Showings are generally well exposed, widths erratic.</p> <p>Work to date - Prospecting, mapping by Albert Reeves consulting geologist, Airborne E.M. done 1966 indicating several anomalies off claim group that have not been followed up yet.</p> <p>Information available from Crean - Reeves report, airborne data, specimens.</p>

REPLY	<p>Discussion with Crean - He and Grier would deal group now but will probably plan on prospecting this summer and we could examine property then. Could work out transportation via Ross and Mobile 3 for them. Crean was supposed to bring more information in last week.</p> <p style="text-align: center;">Procell examination of area July 26-31</p>
