10 gammas . . . . .

Airborne Magnetic Survey, June 1964 to February 1966, by Canadian Aero Service Limited, Ottawa.

No correction has been made for regional variation.

The planimetry for this map was obtained from topographical map sheets published by the Department

The magnetic data on this map were compiled from inf recorded along the flight lines shown. The anomalies express magnetic contours are dependent on the variable magnetic into the underlying rocks, and may be due to conditions near, or at depths below the surface. High magnetic anomalies normally the presence of basic rocks, such as diabase, gabbro, or serpenti have a relatively high iron content, but in special instances may or partly due, to concentrations of magnetic ore minerals. By the magnetic anomalies, various rock bodies or structural feath
