Cinova Lake

7 July → 10 July 1968

Alex OEX

Silt Samples:

105-N-11

PD 68-223 → 243

ML 68-291 → 329

} total = 60

Notes:

No rock type other than quartzite was found in the area, with the exception of small beds or zones of sexy green phyllite which occur within the quartzite.

Two distinct types of quartzite appear in the area, as described on the map and in notes on the Whitefish Lake area.
