RE: Dy Shaft Holes

DATE: March 21, 1989

I enclose coordinates and elevations for 4 possible shaft locations for the Dy deposit. Location A is the original location that Joe Tatak described to me over the telephone, as near as I could locate it. Location B is the second location that you Kurt, Cliff and I discussed in Whitehorse. Location C is another possible location further downhill from the above two that is closer to the centre of gravity of the deposit and also likely to be near outcrop but is in a steeper area than the other locations. Location D is the location I have taken off of drawings Joe Tatak gave me and is different from all of the above.

I will check out the various areas tomorrow on the ground with a view towards drilling a pilot hole for one of these locations.

Dy Coordinates

A) Original CMD location

UTM
Northing = 6 901 620
Easting = 597 407
Elevation = 1122.5 m

L 15+00E / 3+95N on drill grid

B) Second

UTM
Northing = 6 901 566
Easting = 597 213
Elevation = 1147.5 m

L 13+25E / 2+95N on drill grid

C) New Possible

UTM
Northing = 6 901 505
Easting = 597 533
Elevation = 1077.5 m

L 16+50E / 3+18N on drill grid

D) New CMD location on Drawing

Northing = 6,901,390 N
Easting = 597,332 E
Elevation = 1108 m

L 14+75 / 1+70N on drill grid
