Dear Mr. Yanagawa,

Some time this week we will be shipping from the Grum Deposit, one drum, weighing approximately 1100 lbs, containing large chunks of massive sulphides with an estimated combined PbZn content of approximately 12%. We have no assay of this material, but it should have approximately 4.5% Pb and 7.5% Zn, or it should be some approximation of those grades. This sample was taken from location 72W 2N.

When this sample arrives in Vancouver, it will be handled by our Customs Brokers, Ross & Ker, and they will see that it is placed on the next available ship to Japan, consigned to the address you gave me previously, which was:

Mitsubishi Corporation, Non-Ferrous Metal Department C
Lead-Zinc Ore Section
HP-Z
6-3, 2 Chome Marumouchi
Chiyoda-Ku
Tokyo, Japan.

The metallurgical work to be performed on this sample would be the preliminary test procedure which was performed by Dowa Mining Company on the Vangorda diamond drill core. We understand that the cost of this work is \$3,000.

Since we are shipping approximately 1100 lbs, this should guarantee sufficient material in case some difficulty were encountered in the test procedures.

Yours very truly,

KERR ADDISON MINES LIMITED
