Wednesday, June 29, 1988

James M. Stephen, President, is pleased to announce that initial drilling on the 66.67% owned Marg Property near Keno Hill, Yukon has resulted in the discovery of a new volcanogenic massive sulphide deposit. The first two holes were drilled 800 metres apart on coincident geochemical and geophysical anomalies and gave the following assays:

Hole	From (ft)	To (ft)	Interval (ft)	Assays				
				Cu (%)	Pb (%)	Zn (%)	Au (oz/t)	Ag (oz/t)
1	95.0	112.0	17.0	0.70	0.05	1.50	0.003	0.3
2	62.0	82.3	20.3	0.27	7.87	0.02	0.050	9.3
	92.5	107.0	14.5	3.99	1.74	3.44	0.029	1.7

The section of Hole 2 from 62 to 82.3 feet is composed of totally oxidized limonite boxwork which has been almost completely leached of any copper or zinc that was present.

Drilling is continuing on a program budgeted at \$300,000. SMD Mining Ltd. holds the remaining 1/3 working interest. The field program is being managed by Archer, Cathro & Associates (1981) Limited.
