Average core recovery over total footage drilled is about 87%.

Total core recovered is 656.5 *ft.*

The two samples marked "low grade" (DDH #26A 259.5' - 277' and combined sample DDH 47A 207 - 211; 271 - 277) are to be assayed separately and used in controlling grade if necessary. The samples are marked as such on the core box. Mr. Bennett should be so advised.

*- I told Bennett.

I would appreciate it if you could let us know when the core arrives at Noranda. The samples consisting of 35 core trays were shipped from Faro City on March 5th via Great Northern Airways.
