

The surficial geology unit(s) are shown first followed by the terrain modifiers. Combined surficial geology units are used where, for reasons of scale, two or more deposits cannot be delineated individually. The dominant unit (>50 % of polygon coverage) is shown first and the subordinate units (<50 % of polygon coverage) are shown second and third. A dot separates the surficial units and a dash separates the terrain modifier from the surficial geology.

Pf - permafrost within 1 m of surface  
K - thermokarst  
C - colluviation

Geological boundary (defined, assumed).....

Glacial meltwater channel.....

Moraine ridge.....

Esker.....

Crevasse filling.....

Till geochemistry sample (ppm).....

**Sample Number**  
Cu ● Zn

JENNINGS, D.S. and JILSON, G.A., 1986. Geology and sulphide deposits of Anvil Range, Yukon. In: Mineral Deposits of Northern Cordillera, Proceedings of the Mineral Deposits of Northern Cordillera Symposium, J.A. Morin (ed.), Canadian Institute of Mining and Metallurgy, Special Volume 37, p. 319-361.

BOND, J.D., 1999. Surficial geology map and till geochemistry of Blind Creek (105K/7 SE), central Yukon (1:25,000 scale). Exploration and Geological Services Division, Yukon, Indian and Northern Affairs Canada, Open File 1999-20.

Any revisions or additional geological information known to the user would be welcomed by the Yukon Geology Program.
