

QUATERNARY

Q Undifferentiated unconsolidated gravels, sands and clays

EARLY LATE CRETACEOUS

TOMBSTONE INTRUSIONS¹

Kt^g Dykes and sills of fine-grained, locally porphyritic, locally clay- and carbonate-altered apite and granite

UPPER PROTEROZOIC

HYLAND GROUP²

Pv^T Yusezyu Formation³: medium brown, foliated and lineated muscovite-chlorite phyllite, quartzofeldspathic and micaceous psammite and rare calcisilicate rock and marble (diagonal ruling). Pycp^T: carbonaceous phyllite member

ROBERT SERVICE THRUST

TRIASSIC

Td^T Foliation-concordant podiform to lenticular bodies of fine- to medium- grained green amphibole-chlorite-plagioclase meta-diorite or meta-basalt⁴

MISSISSIPPIAN

KENO HILL QUARTZITE⁵

Mk^T Finely to coarsely foliated and lineated, light to dark grey, locally mottled vitreous quartzite, subordinate dark grey carbonaceous phyllite, and calcareous quartzite. Rare unit of green grey phyllite with mm-scale quartz augen of possible felsic metavolcanic origin and thin limestone shown with diagonal ruling.

DEVONO-MISSISSIPPIAN

EARN GROUP

DMEv^T Foliated greenish white to green-grey, quartz-sericite-chlorite phyllite, locally with mm-scale quartz augen, inferred to be of felsic meta-volcanic origin. Subordinate carbonaceous phyllite.

DMEp^T Grey carbonaceous phyllite, siliceous carbonaceous meta-siltstone, rare calcareous greywacke.

TOMBSTONE THRUST

PALEOZOIC ?

Pzu Grey phyllite overlying Keno Hill quartzite in Davidson Range.

AGE CONSTRAINTS

- 1 K-Ar and U-Pb age determinations from similar nearby rocks are early Late Cretaceous suggesting that these rocks belong to the Tombstone intrusions (Leach et al., 1984; Wanless et al., 1987; Stevens et al., 1981; Sinclair et al., 1980; U-Pb age determination by J.K. Mortensen and M.L. Bever, University of British Columbia).
- 2 Hyland Group and Yusezyu Formation are defined by Gordy and Anderson (1993) based on work in Nahanni map area (105 I).
- 3 Yusezyu Formation is intruded by pre-kinematic intermediate to mafic bodies of unknown age that are too small to portray at the scale of mapping.
- 4 U-Pb zircon and baddeleyite determination on similar diorite sills in Tombstone Mountains of 232-1.51-1.2 Ma (Mortensen and Thompson, 1990).
- 5 Mississippian age is based on Visean-Namurian conodonts obtained from Keno Hill quartzite in Tombstone Mountains (Mortensen and Thompson, 1990; Orchard, 1991).
- 6 This unit may be an infold of DMEv^T from which Devonian and Mississippian U-Pb ages have been obtained. This unit is in similar structural position to unit hosting MAIRO VMS deposit in southern Nash Creek map area (YUKON MINFILE 106 D009).
- 7 Relatively imprecise Devonian and Mississippian U-Pb age determinations have been obtained from this unit in northeastern Mayo map area by M.L. Bever and J.K. Mortensen, University of British Columbia. This unit may correlate with the unit hosting the MAIRO VMS deposit - see also note 6.
- 8 This unit is intruded by pre-kinematic mafic sills equivalent to unit 1⁴ and is therefore pre mid-Triassic. If the unit stratigraphically overlies the Keno Hill quartzite, then it is constrained to be Carboniferous-early Triassic in age.

SYMBOLS

Geological contact (defined, approximate, assumed and/or covered).....
Fault or vein-fault, displacement unknown (defined, approximate, assumed and/or covered).....
Thrust fault, teeth on hanging wall (defined, approximate, assumed and/or covered).....
Limit of outcrop.....
Bedding (known upright, overturned, unknown).....
Foliation- (one tick indicates earliest phase of deformation, two or more indicates subsequent phase(s) of deformation) and mineral or clast-elongation lineation.....
Line of cross-section.....
Apparent dip of measured bedding, foliation (in cross-section).....
Foliation form lines in cross-section.....
Summer roads.....

RECOMMENDED CITATION

MURPHY, D.C. and ROOTS, C.F., 1996. Geological map of Keno Hill area, Central Yukon (105 M/14). Exploration and Geological Services Division, Indian and Northern Affairs Canada, Map 1996-1, scale 1:50 000.

This map accompanies MURPHY, D.C. 1997. Geology of the McQuesten River region, northern McQuesten and Mayo map areas, Yukon (115 P/14,15,16 and 105 M/13,14). Exploration and Geological Services Division, Yukon, Indian and Northern Affairs Canada, Bulletin 6.

Digital cartography and drafting by Will van Randen, Yukon Geology Program

Any revisions or additional geological information known to the user would be welcomed by the Yukon Geology Program.

Copies of this map, the accompanying report and YUKON MINFILE may be purchased from Geoscience Information and Sales, Exploration and Geological Services Division, Indian and Northern Affairs Canada, Room 102-300 Main St. Whitehorse, Yukon Y1A 2B5 Ph. 867-667-3284 Fax 867-667-3267.

Store the map in a dark area to prevent the colours from fading.

Map released August, 1997, subsequent revision dates are:
