INTRODUCTION

This publication is intended as a snapshot of the hard rock mineral resources of Yukon. It is up-to-date as of November, 2015.

The tables herein have been compiled from information derived from Yukon MINFILE - A database of mineral occurrences and from various technical reports and information filed in the SEDAR (system for electronic document analysis and retrieval) system. Reserve and resource figures presented are quoted from referenced industry sources, technical reports, assessment reports, etc.

This document does not include cut-off grades for resources and reserves. Some numbers have been rounded-off for readability. Metals contained are amounts reported by companies, or were calculated based on reported grade and tonnage.

Included in the tables are historic estimates of tonnage and grade for some deposits not meeting the minimum requirement for mineral resources and reserves as defined by National Instrument 43-101 and CIM standards. These are distinguished from National Instrument 43-101 compliant resources that are indicated by an asterisk(*).

The reader is encouraged to refer to the original data for detailed information. We accept no responsibility for any errors or omissions.

Units of measure abbreviations

t = tonnes

Mt = million tonnes

g/t = grams per tonne

koz = thousand ounces

Moz = million ounces

Mlb = million pounds

Blb = billion pounds

Summary of contents

This publication includes:

- a colour map and legend of mineral deposits for each commodity (or commodities) with reserves/resources; and
- tables of mineral deposits organized by commodity, deposit types and sub-types.

Each table contains the following information:

- name of deposit;
- corresponding number on each commodity map;
- other names by which the deposit is known;
- owner and optionee (if applicable);
- Yukon MINFILE reference number;
- National Topographic System (NTS) map sheet;
- latitude and longitude;
- straight line distance from nearby community;
- mineralized zone;
- year resource was calculated
- reference;
- mined zone(s) where applicable
- Tonnage
- mineral resource/reserve and category
- NI 43-101 compliance
- production (tonnage) and years
- grade/commodity; and
- contained metals
