PM01-234	Expires: 2009/07/01

Work History

2002 - One test pit was excavated on the left limit of Iron Creek, pay gravels were stockpiled and the test pit was used as a settling pond to sluice back into.

Equipment

A new Holland EC215 excavator was used to strip, stockpile pay gravels and feed the trommel. A 3-foot diameter trommel with a pipe grizzly and dump box was used to process pay materials. A pump was used to supply the trommel with water directly from Iron Creek. The effluent went back into the test pit and there was no evidence of a discharge.

Landforms

Landform	Comments
Alluvial Valley	

Bedrock Geology

The creek is underlain by schist, gneiss, quartzite, and limestone of Cambrian or earlier age. These rocks are cut by a large Cretaceous intrusion of granite, granodiorite, and diorite in the upper reaches of the creek.
