

located along the trend of the anticline approximately 2.7 km from a high-level Late Cretaceous pluton. The area is within a 6 km trend of anomalous soil geochemistry and coincident geophysical anomalies.

Table 5. Selected 2008 drill intersections for the Rau property.

Drillhole	Depth of intersection (m)	Intersection
Rau08-02	52.7	68.7 m @ 1.24 g/t Au
Rau08-03	9.1	53.4 m @ 1.73 g/t Au
Rau08-04	98.6	71.6 m @ 1.59 g/t Au
Rau08-05	71.5	78.5 m @ 1.71 g/t Au
Rau08-06	6.7	62.0 m @ 1.50 g/t Au
Rau08-07	172.9	65.0 m @ 1.52 g/t Au
Rau08-016	19.8	46.4 m @ 2.92 g/t Au

Figure 6. Rau property drill core (DDH08-05) with arsenopyrite, pyrite and pyrrhotite mineralization.

VEIN/BRECCIA

A significant new gold discovery was made by Underworld Resources (www.underworldresources.com) on the **White Gold** property (Yukon MINFILE 1150 011,012), 90 km south of Dawson, which was drilled for the first time in 2008 (Fig. 7). Two near-surface gold mineralized zones – the Golden Saddle and Arc – were intersected in drilling. Both zones are open in all directions for expansion. The discovery hole on the Golden Saddle zone returned an impressive 4.03 g/t Au over 19.58 m, and the discovery hole on the Arc zone intersected 1.18 g/t Au over 28.5 m. Drilling has traced continuous gold mineralization at Golden Saddle for

Figure 7. Geologist Al Doherty and prospector Shawn Ryan examine visible gold in core at the White Gold property.

450 m along strike and to 170 m down-dip. The Arc zone soil anomaly, which is characterized by gold values exceeding 80 ppb, extends over 2 km. The two drillholes that intersected mineralization on the Arc Zone were located 600 m apart (Table 6). The two-phase drilling program on the property consisted of 3431 m in 27 holes. Mineralization consists of quartz veins and breccia zones with minor pyrite and arsenopyrite associated with low-angle thrust faulting hosted in altered gneiss and schist of the Yukon-Tanana terrane. The property has been extensively soil-sampled and contains several more areas of anomalous geochemistry that are still untested by drilling. Underworld completed additional geological and structural mapping on the property and has financed the 2009 drilling program.

Table 6. Selected 2008 drill intersections for the White Gold property.

Drillhole	Depth of intersection (m)	Intersection
Golden Saddle zone		
WD08-04	14.5	18.08 m @ 4.35 g/t Au
WD08-013	63.6	24.58 m @ 5.60 g/t Au
WD08-021	96.0	50.70 m @ 3.10 g/t Au
WD08-24	from surface	15.0 m @ 2.91 g/t Au
Arc zone		
WD08-14	from surface	28.5 m @ 1.18 g/t Au
WD08-17	100.0	29.0 m @ 1.47 g/t Au

The **Sonora** property (Yukon MINFILE 115J 008) of Northern Tiger Resources (www.northerntigerresources.com) is host to yet another new gold discovery in Yukon. Drilling in 2008 consisted of 10 holes for 2238 m (Table 7). The Nightmusic zone returned several intersections including a 4.8 m intercept with visible gold grading 2.31 g/t Au, 19.8 g/t Ag and 0.737% Cu. The drilling was following up on a single
